

Why Thumper?

Take it from the pros. Thumper is the first choice of chiropractors, massage therapists and professional athletes in treating muscle aches and tension. In fact Thumper massagers are used by over 150,000 professionals worldwide and is the only massager on permanent display in the Hockey Hall of Fame.

Here's why: You feel a Thumper massage throughout your body, not just on the surface of your skin.

How is it different? IT'S NOT A VIBRATOR.

Unlike ordinary electric massagers that work with orbital action and do nothing more than 'rub' your skin, thumper releases muscular tension with tapotement: a steady, comfortable, pulsed acu-pressure that easily penetrates even the thickest muscles. Sending healing pulsations deep into your body, penetrating through all muscle layers.

- All Thumpers are **DIRECT DRIVE** where the energy of the motor is sent efficiently, directly into the muscle you wish to massage.
- All Thumpers are **DYNAMICALLY BALANCED** where the massage energy does not 'creep' back to the handles or casing of the model. No kickback to your hands or casing.
- All Thumpers are **STRONG**.

There is no mistaking these models with Far East imports. Only light pressure is necessary for complete penetration. This saves you the effort. You receive a deep-tissue massage. Thumper does the work, not you.
